Employment History

Software Engineer II – The Home Depot

October 2025 – Present

- Independently develop, test, deploy, and maintain scalable software solutions, consistently refactoring products to meet evolving customer and associate needs.
- Collaborate with cross-functional teams in agile environments to deliver high-quality production applications and drive process improvements.
- Mentor and guide junior engineers, fostering technical and leadership growth within the team.
- Participate in product and tool selection, configuration, security, resilience, performance tuning, and production monitoring.
- Design, develop, and maintain test automation frameworks for web and backend systems using tools like Selenium and Playwright.
- Build and own front-end (UI) automation, validating functionality, cross-browser compatibility, and user experience.
- Develop API and service-level automated tests using Postman, REST Assured, and similar frameworks.
- Integrate automated test execution into CI/CD pipelines and leverage modern software design patterns.
- Ensure software quality through unit, functional, destructive, and performance testing, and strong debugging/root cause analysis.
- Partner closely with software engineers and product teams to drive testability, quality standards, and early defect prevention.
- Track and report quality metrics using Jira, TestRail, Zephyr, or similar test management tools.
- Demonstrate proficiency in front-end technologies (HTML, CSS, JavaScript/TypeScript), object-oriented programming (Java), and database/cloud computing techniques.
- Apply security frameworks for user and service authorization/authentication and maintain version control with Git.
- Actively seek opportunities for professional growth and adapt to shifting demands in fast-paced environments.

Software Engineer – The Home Depot*August 2018 – September 2025*

- Designed, developed, and maintained scalable web applications using technologies such as React, Vue.js, JavaScript, and Node.js.
- Worked collaboratively with cross-functional teams to deliver optimized software solutions.
- Established automated testing standards to ensure application reliability
- Led code reviews and mentored junior developers, fostering a culture of quality and continuous improvement.
- Applied Agile methodologies to manage project timelines and consistently delivering high-quality software.
- Debugged and resolved complex software issues, ensuring system stability and reliability.
- Participated in the entire software development lifecycle, from requirements gathering to deployment and maintenance.
- Kept abreast of industry trends and best practices to improve software development processes.
